

Andre Morales

Andre Morales is a 20 year old university student entering his second year at York University after taking a gap year to explore his interests. He is the youngest child in a close knit family of five, with two older sisters and a cat named Chai. Growing up, Andre has learned to communicate, adapt, and stand out creatively. He enjoys designing custom clothing graphics, and hopes to have his own design brand one day. He also likes watching and playing basketball with his friends.

Andre is currently majoring in Digital Media and spends a good amount of time in computer labs working on various design projects. He is highly proficient with computers and GUI based applications like Photoshop and Figma, but he has never used a carpooling app before. However, he is curious about new apps, especially ones that make his daily life easier and better. Andre considers himself an extrovert who enjoys connecting with others.

He commutes from a suburban location, which usually takes around an hour. His commute relies on buses heavily, which are mostly crowded and delayed. This really frustrates Andre and affects him on a daily basis. Andre's main goal is to find a carpooling app that is reliable and affordable, which would also help him meet new people. He also likes the idea of being able to socialize in his daily commutes. He prefers convenience and simplicity when using applications.

Charlotte Courtois

Charlotte Courtois is a 22 year old university student in her fourth year of environmental studies at Toronto Metropolitan University. She lives off campus with her parents and her younger brother in an urban area, which encourages her to drive to school each day. Charlotte is a responsible and organized person, she often balances her course work and her part time job at a local cafe while also volunteering on campus with the sustainability club. She enjoys photography, hiking, and spending time outdoors. She also enjoys connecting with and protecting nature

Even though she loves driving, Charlotte finds her daily commute increasingly stressful and expensive. She has been complaining about the recent increase in gas prices and the parking fees on campus. She also feels guilty about her carbon footprint. Public transit is not reliable enough for her early morning classes, so she mostly ends up driving alone. This frustration has made her start looking for a smarter and a more sustainable option for commuting.

Charlotte is comfortable using technology and often uses navigation apps, budgeting tools, and carbon footprint tracking apps. She values simplicity and efficiency. Currently, her main goal is to find a carpooling app that reduces commuting costs and environmental impact while helping her connect with fellow students who share her values. She is looking for an app that promotes collaboration, saves time, and supports environmental movement.
